

“At 60 miles an hour the loudest noise in this new Rolls-Royce comes from the electric clock”

What makes Rolls-Royce the best car in the world? “There is really no magic about it—it is merely patient attention to detail,” says an eminent Rolls-Royce engineer.

1. “At 60 miles an hour the loudest noise comes from the electric clock,” reports the Technical Editor of *THE MOTOR*. The silence of the engine is uncanny. Three mufflers tune out sound frequencies—acoustically.

2. Every Rolls-Royce engine is run for seven hours at full throttle before installation, and each car is test-driven for hundreds of miles over varying road surfaces.

3. The Rolls-Royce is designed as an owner-driven car. It is eighteen inches shorter than the largest domestic cars.

4. The car has power steering, power brakes and automatic gear-shift. It is very easy to drive and to park. No chauffeur required.

5. There is no metal-to-metal contact between the body of the car and the chassis frame—except for the speedometer drive. The entire body is insulated and under-sealed.

6. The finished car spends a week in the final test-shop, being fine-tuned. Here it is subjected to 98 separate ordeals. For example, the engineers use a *stethoscope* to listen for axle-whine.

7. The Rolls-Royce is guaranteed for three years. With a new network of dealers and parts-depots from Coast to Coast, service is no problem.

8. The Rolls-Royce radiator has never changed, except that when Sir Henry Royce died in 1933 the monogram RR was changed from red to black.

9. The coachwork is given five coats of primer paint, and hand rubbed between each coat, before fourteen coats of finishing paint go on.

10. By moving a switch on the steering column, you can adjust the shock-

absorbers to suit road conditions. (The lack of fatigue in driving this car is remarkable.)

11. Another switch defrosts the rear window, by heating a network of 1360 invisible wires in the glass. There are two separate ventilating systems, so that you can ride in comfort and silence with all the windows closed. Air conditioning is optional.

12. The seats are upholstered with eight hides of English leather—enough to make 128 pairs of soft shoes.

13. A picnic table, veneered in French walnut, slides out from under the dash. Two more swing out behind the front seats. The backrests on the front seats are individually adjustable.

14. You can get such optional extras as an Espresso coffee-making machine,

a dictating machine, a bed, hot and cold water for washing, an electric razor or a telephone.

15. You can lubricate the entire chassis by simply pushing a pedal from the driver's seat. A gauge on the dash shows the level of oil in the crankcase.

16. Gasoline consumption is remarkably low and there is no need to use premium gas; a happy economy.

17. There are two separate systems of power brakes, hydraulic and mechanical. The Rolls-Royce is a very safe car—and also a very lively car. It cruises serenely at eighty-five. Top speed is in excess of 100 m.p.h.

18. Rolls-Royce engineers make periodic visits to inspect owners' motor cars and advise on service.

ROLLS-ROYCE AND BENTLEY

19. The Bentley is made by Rolls-Royce. Except for the radiators, they are identical motor cars, manufactured by the same engineers in the same works. The Bentley costs \$300 less, because its radiator is simpler to make. People who feel diffident about driving a Rolls-Royce can buy a Bentley.

PRICE. The car illustrated in this advertisement—f.o.b. principal ports of entry—costs \$13,550.

If you would like the rewarding experience of driving a Rolls-Royce or Bentley, write or telephone to one of the dealers listed on page 54. Rolls-Royce Inc., 10 Rockefeller Plaza, New York 20, Circle 5-1144.

Jet Engines and the Future

Certain airlines have chosen Rolls-Royce turbo-jets for their Boeing 707's and Douglas DC8's. Rolls-Royce prop-jets are in the Vickers Viscount, the Fairchild F.27 and the Grumman Gulfstream.

Rolls-Royce engines power more than half the turbo-jet and prop-jet airliners supplied to or on order for world airlines.

Rolls-Royce now employ 42,000 people and the company's engineering experience does not stop at motor cars and jet engines. There are Rolls-Royce diesel and gasoline engines for many other applications.

The huge research and development resources of the company are now at work on many projects for the future, including nuclear and rocket propulsion.

The Rolls-Royce Silver Cloud II—\$15,655 P.O.E. (Slightly higher in Alaska and Hawaii.)

“At 60 miles an hour the loudest noise in this new Rolls-Royce comes from the electric clock”

What makes Rolls-Royce the best car in the world? “There is really no magic about it—it is merely patient attention to detail,” says an eminent Rolls-Royce engineer.

1. “At 60 miles an hour the loudest noise comes from the electric clock,” reports the Technical Editor of *THE MOTOR*. The silence inside the car is uncanny.

2. Every Rolls-Royce engine is run for four hours at full throttle before installation, and each car is extensively test-driven over varying road surfaces. Every Rolls-Royce has its “History Book”—an *eleven-page* signed record of all operations and inspections performed on the car.

3. The Rolls-Royce Silver Cloud II is designed as an *owner-driven* car. It has power steering, power brakes and automatic gear-shift. It is very easy to drive and to park. Women handle the car with ease.

4. The finished car spends a week in the final test-shop, being fine-tuned. Here it is subjected to ninety-eight separate ordeals. For example, the engineers use a stethoscope to listen for axle-whine.

5. The new eight-cylinder aluminium engine is even more powerful than the previous six-cylinder unit. It accelerates from zero to 60 miles an hour in 11.4 seconds. (ROAD AND TRACK test report.)

6. The coachwork is given as many as *nine* coats of finishing paint—*hand rubbed*.

7. Every Rolls-Royce takes the “Monsoon Test.” Windows are rolled up and the car is pelted with water and air at gale force.

8. By moving a switch on the steering column, you can adjust the shock-absorbers to suit road conditions. (The lack of fatigue in driving this car is remarkable.)

9. There are *three* independent brake linkages. The Rolls-Royce is a very *safe* car—and also a very responsive and *lively* car. It cruises serenely at eighty-five. Top speed is in excess of 100 m.p.h.

10. Automatic transmission, power brakes and power steering are *standard*. So are

the radio, heating and ventilating equipment, walnut panelling, seats adjustable for tilt and rake, and white sidewall tires. The Rolls-Royce people do not designate essential equipment as “optional extras.”

11. The Bentley is made by Rolls-Royce. Except for the radiator shells, they are identical motor cars, manufactured by the same engineers in the same works. The Bentley costs \$300 less, because its radiator is simpler to make. People who feel diffident about driving a Rolls-Royce can buy a Bentley.

PRICE. The Rolls-Royce motor car illustrated in this advertisement costs \$15,655 at port of entry. Slightly higher in Alaska and Hawaii.

If you would like to try driving a Rolls-Royce or Bentley, write or telephone any dealer on page 124. Or write Mr. Norman C. Miller, Executive Vice President, Rolls-Royce Inc., Room 465, 45 Rockefeller Plaza, New York 20, N. Y.

The Rolls-Royce Silver Cloud II—\$15,655 P.O.E. (Delivery costs slightly higher in Alaska and Hawaii.)

“At 60 miles an hour the loudest noise in this new Rolls-Royce comes from the electric clock”

If you would like to try driving a Rolls-Royce or Bentley, write or telephone any dealer on page 52. Or write Mr. Norman C. Miller, Executive Vice President, Rolls-Royce Inc., Room 468, 45 Rockefeller Plaza, New York 20, N. Y.

The Rolls-Royce Silver Cloud II—\$15,655 P. O. E. (Slightly higher in Alaska and Hawaii.)

"At 60 miles an hour the loudest noise in this new Rolls-Royce comes from the electric clock"

What makes Rolls-Royce the best car in the world? "There is really no magic about it—it is merely patient attention to detail," says an eminent Rolls-Royce engineer.

1. "At 60 miles an hour the loudest noise comes from the electric clock," reports the Technical Editor of THE MOTOR. The silence inside the car is uncanny. Three exhaust mufflers tune out sound frequencies—acoustically.

2. Every Rolls-Royce engine is run for four hours at full throttle before installation, and each car is extensively test-driven over varying road surfaces. Every Rolls-Royce has its "History Book"—an eleven-page signed record of all operations and inspections performed on the car. This goes into the Company's permanent files.

3. The Rolls-Royce Silver Cloud II is designed as an owner-driven car. It has power steering, power brakes and automatic gear-shift. It is very easy to drive and to park. Women handle the car with ease.

4. The finished car spends a week in the final test-shop, being fine-tuned. Here it is subjected to ninety-eight separate ordeals. For example, the engineers use a stethoscope to listen for axle-whine. Silent operation of every part is the standard for acceptance.

5. The new eight-cylinder aluminium engine is even more powerful than the previous six-cylinder unit, yet it weighs ten pounds less. It accelerates from zero to 60 miles an hour in 11.4 seconds. (ROAD AND TRACK test report.)

6. The coachwork is given as many as nine coats of finishing paint—hand rubbed.

7. Every Rolls-Royce takes the "Monsoon Test." Windows are rolled up and the car is pelted with water and air at gale force. Not a drop may come through.

8. By moving a switch on the steering column, you can adjust the shock-absorbers to suit road conditions. (The lack of fatigue in driving this car is remarkable.)

9. Another switch defrosts the rear window, by heating a network of 1360 almost invisible wires in the glass.

10. The seats are upholstered with eight hides of English leather—enough to make 128 pairs of soft shoes.

11. A picnic table, fashioned of inlaid French walnut, slides out from under the dash. Two more swing out behind the front seats.

12. The engine cooling fan is lopsided. Its five blades are unequally spaced and pitched to take thick and thin slices of air. Thus it does its work in a whisper. The company goes to fantastic lengths to ensure peace and quiet for the occupants of the car.

13. There are three independent brake linkages. The Rolls-Royce is a very safe car—and also a very responsive and lively car. It cruises serenely at eighty-five. Top speed is in excess of 100 m.p.h.

14. The gas tank cannot be opened without the driver's consent: you unlock it electrically from a button on the dash.

15. Automatic transmission, power brakes and power steering are standard. So are the radio, heating and ventilating equipment, walnut panelling, seats adjustable for tilt and rake, and white sidewall tires. The Rolls-Royce people do not designate essential equipment as "optional extras."

16. The Bentley is made by Rolls-Royce. Except for the radiator shells, they are identical motor cars, manufactured by the same engineers in the same works.

The Bentley costs \$300 less, because its radiator is simpler to make. People who feel diffident about driving a Rolls-Royce can buy a Bentley.

ROLLS-ROYCE AND BENTLEY PRICE. The car shown above costs \$15,655 P.O.E. Slightly higher in Alaska and Hawaii.

If you would like to try driving a Rolls-Royce or Bentley, write or telephone the dealer listed below. For further information or complete list of U.S. dealers, write Mr. Richard L. Yorke, Vice President, Rolls-Royce Inc., Room 465, 45 Rockefeller Plaza, New York, N.Y.

The best car
in the world

ROLLS-ROYCE

Owners of the new Rolls-Royce *Silver Cloud* sedan are agreed that in their opinion this motor car is the greatest in the long tradition of engineering skill which has won for Rolls-Royce its enduring world-fame.

You, too, will find that your first ride in the *Silver Cloud* will bring you a new and exciting experience in luxurious comfort and effortless driving. Here is British craftsmanship at its best. And here is a classically modern style which represents a sound investment for years and years of faithful service.

The *Silver Cloud's* lively acceleration and smooth cruising speed are attained with an uncanny silence and with surprising economy.

CHECK OVER THESE IMPORTANT POINTS:—

- ★ Rolls-Royce guarantee engine and chassis for three years within the price of \$13,550. (f.o.b. principal ports of entry.)
- ★ Servicing presents no problems that cannot be solved by any competent garage mechanic.
- ★ The owner-driver will appreciate the matchless handling and road-holding characteristics which make for safety and comfort.
- ★ The *Silver Cloud* has all the preferred design features:

POWER STEERING • AUTOMATIC TRANSMISSION
POWER BRAKES • RIDE CONTROL
AIR CONDITIONING OPTIONAL

Give yourself the great satisfaction of owning a Rolls-Royce. There is no finer car in the world. For the rewarding experience of sitting at the wheel and driving the famous *Silver Cloud*, simply write your nearest distributor.

OGILVY'S IMPACT ON OTHER BRANDS (1965)

Ford quieter than Rolls-Royce?

**“Dammit, sir!
Those upstart American
car-makers
just don't know their place...”**

—London Daily Mirror, October 26, 1964

The claim,” continues the world's largest daily newspaper, “comes from the Ford Motor Company of Detroit. You know, those chaps who built the Tin Lizzie—the Model T.”

They were having a little quiet British fun with our recent advertisement describing the acoustical tests in which 1965 Fords, both sedan and hardtop, with 289-cu. in. V-8 engines rode quieter than the legendary Rolls-Royce.

People react very strongly to this news. A radio station in New Orleans editorialized in mock dismay that we'd “shattered a dream.” Rolls-Royce buffs everywhere probably said,

“Malarkey!” (But we'll bet they hadn't taken a test drive in the new Ford.)

For years, said the London Daily Mirror, Rolls-Royce has noted that “at 60 miles per hour the loudest noise in the Rolls-Royce comes from the electric clock.” They pointed out that “tests carried out by a firm of acoustic consultants had shown that at 60 mph the new Ford was 2.8 decibels quieter than a Rolls.”

Ford may not match all the luxury of a Rolls-Royce, but you do get the luxury of quiet. And quiet is dramatic evidence of strength, solidity and quality in a car.

If you'd like to take sides in the Rolls-Royce controversy, we know the best place to start: at your Ford Dealer's. Stop by and take a test drive in a 1965 Ford. We think you'll be pleasantly surprised by what you see . . . and what you don't hear!

*Best year yet to go Ford!

ADS FOR ROLLS-ROYCE JET ENGINE - AS MENTIONED IN "60 MPH" AD (1958)

Rolls-Royce Conway by-pass jets are being supplied for the Boeing 707-420, Douglas DC-8, and Vickers VC-10. The car is a Silver Cloud.

Rolls-Royce, who make the best cars in the world, also make the best airplane engines. More than half the jets and prop-jets supplied or on order for world airlines are made by Rolls-Royce. Over fifty airlines have chosen Rolls-Royce.

Photographed aboard a Vickers Viscount. The engines are Rolls-Royce Dart prop-jets.

Rolls-Royce...a reassuring view from any jet plane

You are looking at one of the most reassuring sights you can see from any airplane—the famous RR monogram on the engine cowling.

This RR proclaims that the engines of your plane are made by the same people who make the best motor cars in the world. Today more than half

the commercial jet and prop-jet planes in service or on order are powered by Rolls-Royce engines.

Over fifty airlines have specified Rolls-Royce jets for their new airplanes.

Rolls-Royce engineering experience does not stop at jet engines. Their huge research resources are also at work on nuclear and rocket power.

ROLLS-ROYCE, INC., 10 ROCKEFELLER PLAZA, NEW YORK 20
ROLLS-ROYCE OF CANADA LTD., COTE DE LIESSE ROAD, MONTREAL, CANADA

Powered by Rolls-Royce Jets or Prop-Jets

Twelve new jet airliners powered by Rolls-Royce engines

DOUGLAS DC-8

New Rolls-Royce Conway by-pass jets power the new Douglas DC-8's. The Conway gives greater economy in operation, with less noise, than comparable straight jets.

VICKERS VC-10

Four Rolls-Royce Conway by-pass jets will power this advanced airliner. Conways of 16,500-lb. guaranteed minimum thrust are in production now. Models with 17,500-lb. and 18,500-lb. thrust will be built later.

BOEING 707-420

Four Rolls-Royce Conway by-pass jets power the Boeing 707-420. Rolls-Royce build the complete engine pods which include engine, thrust reverser and exhaust silencer.

FAIRCHILD F-27

This fast new twin prop-jet transport is powered by rugged Rolls-Royce Dart prop-jet engines. The F-27 has been ordered by fourteen airlines and thirteen corporations for airline local service and executive use.

ARMSTRONG WHITWORTH ARGOSY

This four-engine passenger/freight transport will be powered by reliable Rolls-Royce Dart prop-jets. Airlines report that a higher percentage of Darts reach full overhaul life than any other engine in service.

VICKERS VISCOUNT 810/840

This newest version of the famous Vickers Viscount is powered by four Rolls-Royce Dart prop-jet engines. Dart engines have flown more than 5,000,000 hours in regular airline service in Viscounts.

SUD-AVIATION CARAVELLE

Rolls-Royce Avon jet engines power this new short/medium range French-built airliner. The two Rolls-Royce Avon jets, each capable of 10,000-lb. thrust, are mounted in pods on the rear of the fuselage.

GRUMMAN GULFSTREAM

This new 370-m.p.h. executive transport is powered by two Rolls-Royce Dart prop-jets. The Dart has been approved for between-overhaul life of up to 2000 hours—the longest life yet approved for a turbine engine.

HANDLEY PAGE DART HERALD

Two Rolls-Royce Dart prop-jets power this airliner designed for passenger and freight traffic over short/medium routes. Every new model of the Dart, in addition to increased power, has had lower fuel consumption.

DE HAVILLAND 121

Rolls-Royce RB. 141 jet engines will power this remarkable new airliner. The RB. 141 is a by-pass engine of advanced design that will have a lower fuel consumption than any jet engine now in operation.

DE HAVILLAND COMET 4

The Comet 4, now in trans-Atlantic service, is powered by four Rolls-Royce Avon jet engines which are also fitted with Rolls-Royce thrust reversers and exhaust silencers.

VICKERS VANGUARD

Four Rolls-Royce Tyne prop-jet engines power this new airliner. Tyne engines are the first of a new generation of prop-jets which will give cruising fuel consumptions comparable with modern piston engines.

Rolls-Royce, who make the best cars in the world, also make the best airplane engines. More than half the jets and prop-jets supplied or on order for world airlines are powered by Rolls-Royce. Over 50 airlines have chosen Rolls-Royce.

IMPACT OF OGILVY'S "QUIET" HOOK ON FUTURE CAMPAIGNS (1989)

USAir-THE QUIET APPROACH

Congratulations are in order.

A new fleet of 20 Fokker 100s, with 20 options, will soon sport the new USAir livery. And Rolls-Royce Tay engines. Quiet enough to operate comfortably within the stringent noise regulations of Orange County, California.

Peace of mind comes in many forms. Rolls-Royce operators enjoy lower ownership

ROLLS-ROYCE plc, 65 BUCKINGHAM GATE, LONDON SW1B 6AT.

costs, fuelled by greater efficiency and reduced maintenance. Like performance and reliability, they're products of Rolls-Royce ingenuity.

Something that will pay big dividends for USAir.

A sound investment today...and for the future. For in today's environmentally conscious climate, it promises a healthy return for everyone.

ROLLS-ROYCE INC., 475 STEAMBOAT ROAD, GREENWICH, CONNECTICUT 06830.

"At 60 Miles An Hour" Rolls-Royce Ad by David Ogilvy
(<https://swiped.co/rolls-royce-ad-by-david-ogilvy>)

Swiped in February 2014

Ran 1958-1962
